

2019 Annual

Water Quality Report

Newburgh Operations

PWS ID: IN5287004

INDIANA
AMERICAN WATER

This report contains important information about your drinking water. Have someone translate it for you if needed.

Este informe contiene información importante acerca de su agua potable. Haga que alguien lo traduzca para usted, ó hable con alguien que lo entienda.

A Message from the President

Indiana American Water is proud to be your local water company. Every day, our lives revolve around water. It's involved in everything we do, everything we use. It is our most precious resource. That's why it's important that we provide you with information about our commitment to providing quality water service at a cost of only about a penny a gallon.

At Indiana American Water, we take great pride in what we do and we hold ourselves to high standards in delivering safe, clean, reliable, and affordable drinking water to the people we serve. Our teams consist of industry-leading researchers, scientists, and plant operators, all committed to delivering high quality water.

Just as important, we place a strong focus on acting as stewards of our environment. In Indiana, we participate in activities that help communities protect the watersheds and educate customers on how to use water wisely. You can learn more about these ideas and programs on our website at www.indianaamwater.com.

I am proud to share with you with the 2019 annual water quality report with detailed information about the source and quality of your drinking water. We have prepared this report using data from water quality testing conducted for your local water system through December 2019.

When it comes to complying with strict federal regulations for delivering safe, quality drinking water, we have scored among the highest of all water companies. As a subsidiary of American Water, we're part of a long-standing American Water tradition of quality service. Our strength as an industry leader comes from our employees throughout the business and their expertise, coming together to provide high quality water service.

If you would like more information regarding our commitment to water quality, visit our website at <https://amwater.com/inaw/water-quality>.

We look forward to serving you throughout 2020.

Sincerely,

Matthew Prine
President, Indiana American Water

American Water Works Company, Inc., together with its subsidiaries, is referred to as American Water. "Indiana American Water" and the star logo are the registered trademarks of American Water Works Company, Inc. All rights reserved.

WE CARE ABOUT WATER. IT'S WHAT WE DO.®

About Indiana American Water

Indiana American Water, a subsidiary of American Water (NYSE: AWK), is the largest investor-owned water utility in the state, providing high-quality and reliable water and/or wastewater services to approximately 1.34 million people.

About American Water

With a history dating back to 1886, American Water is the largest and most geographically diverse U.S. publicly traded water and wastewater utility company. The company employs more than 6,800 dedicated professionals who provide regulated and market-based drinking water, wastewater and other related services to 15 million people in 46 states. American Water provides safe, clean, affordable and reliable water services to our customers to help keep their lives flowing. For more information, visit amwater.com and follow American Water on [Twitter](#), [Facebook](#) and [LinkedIn](#).

What Is a Water Quality Report?

To comply with state and U.S. Environmental Protection Agency (EPA) regulations, Indiana American Water issues a report annually describing the quality of your drinking water. The purpose of this report is to raise your understanding of drinking water and awareness of the need to protect your drinking water sources. In 2019, we conducted tests for many contaminants and all tested contaminants were below state and federal maximum contaminant levels (MCL) to the extent a MCL exists. This report provides an overview of last year's (2019) water quality. It includes details about where your water comes from and what it contains.

If you have any questions about this report or your drinking water, please call our Indiana Customer Service Center at (800) 492-8373.

Share this report

Landlords, businesses, schools, hospitals and other groups are encouraged to share this important water quality information with water users at their location who are not billed customers of Indiana American Water and therefore do not receive this report directly.

Source Water Information

The public water system serving Newburgh and surrounding communities relies on ground water and surface water sources. The ground water sources are obtained from the Scuffletown Well Field. In addition, Newburgh has a supplemental connection to Evansville Water, which relies on surface water obtained from the Ohio River.

Protecting Your Water Source

The Indiana Department of Environmental Management (IDEM) has assessed all public surface and groundwater sources throughout the state to identify potential contaminants. The Indiana American Water–Newburgh Operations sources have a moderate susceptibility to contamination. This means that under current existing land use practices, the likelihood of the source water aquifer becoming contaminated is moderate. This potential contamination can be minimized by implementing appropriate protective measures. Indiana American Water has developed a comprehensive Wellhead Protection Management Plan, in cooperation with community volunteers, to protect the valuable ground water resources serving your community. IDEM has recently recognized this program by awarding Indiana American Water–Newburgh Operations the Hoosier Water Guardian Award with Distinction. If you are interested in environmental water quality issues, please contact our Water Quality Supervisor listed in this report.

Quality drinking water starts upstream. Everyone can help maintain and improve drinking water supplies through the following actions:

- Dispose of pharmaceuticals, household chemicals, oils and paints at proper waste collection sites. Materials can impact water ways if poured down the drain, flushed down the toilet, or dumped on the ground. Contact your county waste authority to find out how to dispose of these materials properly.
- Check for leaks from automobiles and heating fuel tanks. Clean up any spills using an absorbent material like cat litter. Sweep up the material and put it in a sealed bag in the trash.
- Clean up after your pets and limit the use of fertilizers and pesticides.
- Look for local opportunities to take part in watershed activities.
- Report any spills, illegal dumping or suspicious activity to the Indiana Department of Environmental Management.

WE CARE ABOUT WATER. IT'S WHAT WE DO.®

Investing in Newburgh's Future

Indiana American Water invested more than \$5.7 million in improvements in the Newburgh Water system in 2019. Indiana American Water also paid over \$165,000 in local taxes in 2019 and is a valuable source of revenue to the local community and its services.

How to Contact Us

For more information about this report, or for any questions relating to your drinking water, please call Silpa Varanasi, Water Quality Supervisor, at (317) 617-7615. You can also contact Ms. Varanasi by e-mail at Silpa.Varanasi@amwater.com.

For questions about your water bill or service issues, please call our Customer Service Center at (800) 492-8373.

To learn more about Indiana American Water, please visit our web site at www.indianaamwater.com.

Substances Expected to be in Drinking Water

The source of drinking water (both tap water and bottled water) includes rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

Microbial Contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic Contaminants, such as salts and metals, which can be naturally occurring or may result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and Herbicides, which may come from a variety of sources, such as agriculture, urban stormwater runoff, and residential uses.

Organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and also may come from gas stations, urban stormwater runoff, and septic systems.

Radioactive Contaminants, which can be naturally occurring or may be the result of oil and gas production and mining activities.

Special Health Information

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants may be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA and CDC (Centers for Disease Control and Prevention) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the EPA's Safe Drinking Water Hotline at (800) 426-4791. For additional information regarding cryptosporidiosis (a gastrointestinal disease caused by *Cryptosporidium*) and how it may impact those with weakened immune systems, please contact our Customer Service Center at (800) 492-8373.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. U.S. Food and Drug Administration regulations establish limits for contaminants in bottled water, which must provide the same protection for public health. Indiana American Water's treatment processes are designed to reduce any such substances to levels below health concern and the processes are controlled to provide protection against microbial and viral pathogens which could be naturally present in surface and groundwater. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline (800) 426-4791.

Availability of Monitoring Data for Unregulated Contaminants

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. The fourth Unregulated Contaminant Monitoring Rule (UCMR 4) was published in the Federal Register on December 20, 2016. UCMR 4 requires monitoring for 30 chemical contaminants between 2018 and 2020 using analytical methods developed by EPA and consensus organizations. This monitoring provides a basis for future regulatory actions to protect public health.

Monitoring was conducted during 2019 under the EPA Unregulated Contaminant Monitoring Rule 4 (UCMR4). The detected compounds are listed in the table in this report. For information concerning our results, please contact our designated Water Quality Lead listed in this report. Data is also available on the EPA's website <https://www.epa.gov/dwucmr/fourth-unregulated-contaminant-monitoring-rule>.

Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Indiana American Water- Newburgh Operations is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

We take steps to reduce the potential for lead to leach from your pipes into the water. There are also steps that you can take to reduce your household's exposure to lead in drinking water. For more information, please review our [Lead and Drinking Water Fact Sheet](#).

Cross Connection and Backflow Prevention

Protecting your drinking water supply is everyone's responsibility. State regulations require residential, commercial and industrial customers served by a public water system to protect the public water system from potential contamination. Under certain conditions water from private plumbing can flow into the public water distribution system, this is referred to as backflow. In order to prevent potential backflow, some customers are required to install and maintain backflow prevention devices on the main water service lines.

How to Read This Table

Indiana American Water conducts extensive monitoring to determine that your water meets water quality standards. Results from compliance sampling are reported in the accompanying tables. While most monitoring was conducted in 2019, certain substances are monitored less than once per year because the levels do not change frequently. For help with interpreting this table, see the “Table Definitions” section.

Starting with a **Substance**, read across. **Year Sampled** is usually in 2019 or year prior. **MCLG** is the goal level for that substance (this may be lower than what is allowed). **MCL** shows the highest level of substance (contaminant) allowed. **Level Found** represents the measured amount (less is better). **Range of Detections** tells the highest and lowest amounts measured. A **Yes** under **Compliance Achieved** means the amount of the substance met government requirements. **Typical Source** tells where the substance usually originates.

Unregulated substances are measured, but maximum contaminant levels have not been established by the government.

Definitions of Terms Used in This Report

- **AL (Action Level):** The concentration of a contaminant, which, if exceeded, triggers treatment or other requirements, which a water system must follow.
- **MCL (Maximum Contaminant Level):** The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- **MCLG (Maximum Contaminant Level Goal):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- **MRDL (Maximum Residual Disinfectant Level):** The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLs do not reflect the benefits of the use of disinfectants to control microbial contamination.
- **MRDLG (Maximum Residual Disinfectant Level Goal):** The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contamination.
- **mrem/year:** Millirems per year (a measure of radiation absorbed by the body).
- **NA:** Not applicable
- **ND:** Not detected
- **NTU (Nephelometric Turbidity Units):** Measurement of the clarity, or turbidity, of the water.
- **pCi/L (picocuries per liter):** Measurement of the natural rate of disintegration of radioactive contaminants in water (also beta particles).
- **ppm (parts per million):** One part substance per million parts water, or milligrams per liter.
- **ppb (parts per billion):** One part substance per billion parts water, or micrograms per liter.
- **ppt (parts per trillion):** One part substance per trillion parts water, or nanograms per liter.
- **TT (Treatment Technique):** A required process intended to reduce the level of a contaminant in drinking water.
- **%:** means percent

Water Quality Statement

We are pleased to report that during the past year, the water delivered to your home or business complied with, or was better than, all state and federal drinking water requirements. For your information, we have compiled a list in the table below indicating the results of the testing of your drinking water during 2019.

Water Quality Results

Tap Water Samples: Lead and Copper Results - Measured in the Distribution System

Substance (units)	Year Sampled	Action Level	MCLG	90th Percentile	Number of Samples Taken	Number of Samples Above Action Level	Compliance Achieved	Typical Source
Lead (ppb)	2019	15	0	2	30	0	Yes	Corrosion of household plumbing systems; Erosion of natural deposits
Copper (ppm)	2019	1.3	1.3	0.4	30	0	Yes	Corrosion of household plumbing systems; Erosion of natural deposits

Regulated Substances - Measured on the Water Leaving the Treatment Facilities

Substance (units)	Year Sampled	MCL	MCLG	Maximum Amount Detected	Range Low-High	Compliance Achieved	Typical Source
Fluoride (ppm)	2019	4	4	0.13	NA	Yes	Water additive which promotes strong teeth; Erosion of natural deposits; Discharge from fertilizer and aluminum factories
Nitrate (ppm)	2019	10	10	0.63	0.25 - 0.63	Yes	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits

Other Regulated Compounds - Measured in the Distribution System

Substance (units)	Year Sampled	MCL	MCLG	Results	Range Low-High	Compliance Achieved	Typical Source
Total Trihalomethanes (ppb)	2019	80	NA	42.5	14.9 - 46.8	Yes	By-product of drinking water chlorination
Haloacetic Acids (ppb)	2019	60	NA	16.1	4.5 - 14.3	Yes	By-product of drinking water chlorination

American Water Works Company, Inc., together with its subsidiaries, is referred to as American Water. "Indiana American Water" and the star logo are the registered trademarks of American Water Works Company, Inc. All rights reserved.

WE CARE ABOUT WATER. IT'S WHAT WE DO.®

Disinfectant Residual - Measured in the Distribution System

Substance (units)	Year Sampled	MRDL	MRDLG	Level Found	Range Low-High	Compliance Achieved	Typical Source
Chlorine (ppm)	2019	4	4	1.48	1.34 – 1.50	Yes	Water additive used to control microbes

Unregulated Substances- Measured on the Water Leaving the Treatment Facilities

Substance	Year Sampled	Level Found	Range (Low-High)	Typical Source
Hardness (ppm)	2019	248	237 - 268	Naturally occurring
Manganese (ppb) ¹	2019	3.2	0.43 – 3.2	Naturally-occurring element; commercially available in combination with other elements and minerals; used in steel production, fertilizer, batteries and fireworks
Sodium (ppm)	2019	21.6	NA	Naturally occurring
Sulfate (ppm)	2019	94	NA	Erosion of natural deposits

Unregulated Substances- Measured in the Distribution System

Substance	Year Sampled	Level Found	Range (Low-High)	Typical Source
Bromochloroacetic Acid (ppb) ¹	2019	5.2	2.1 – 5.2	By-product of drinking water chlorination
Bromodichloroacetic Acid (ppb) ¹	2019	4.2	1.5 – 4.2	By-product of drinking water chlorination
Chlorodibromoacetic Acid (ppb) ¹	2019	3.8	1.2 – 3.8	By-product of drinking water chlorination
Dibromoacetic Acid (ppb) ¹	2019	3.2	1.6 – 3.2	By-product of drinking water chlorination
Dichloroacetic Acid (ppb) ¹	2019	4.2	1.8 – 4.2	By-product of drinking water chlorination
Monobromoacetic Acid (ppb) ¹	2019	0.63	ND - 0.63	By-product of drinking water chlorination
Trichloroacetic Acid (ppb) ¹	2019	2.8	1.1 – 2.8	By-product of drinking water chlorination

Unregulated Compounds - Measured in the Raw Water prior to Treatment

Substance	Year Sampled	Level Found	Range (Low-High)	Typical Source
Bromide (ppm) ¹	2019	0.10	0.06 – 0.10	Naturally present in the environment
Total Organic Carbon (ppm) ¹	2019	1.810	1.028 – 1.810	Naturally present in the environment

¹ Monitored under UCMR4, the EPA has not set drinking water standards for these contaminants.

INDIANA AMERICAN WATER Cross Connection Control

Three Means Of Preventing Backflow

■ Reduced Pressure Principle Assembly

• Inspection Required
Annually

■ Double Check Principle Assembly

• Inspection Required
Annually

■ Pressure Vacuum Principle Assembly

• Inspection Required
Annually

Indiana Dept. of Environmental Management's Requirements for Cross Connection Control

If the activities on your premises are listed below, then you must have or install a state approved cross connection control device on each water service line and promptly submit test results to Indiana American Water. The state designates the following list of facilities as cross connection hazards. A state approved reduced pressure principle backflow preventer shall be installed on the customer service line serving these facilities, unless otherwise specified.

- (1) All customers with hand irrigation systems, including residential. Either a pressure type vacuum breaker or a reduced pressure principle backflow preventer can be used for cross connection control.
- (2) All customer fire service lines. Double check detector assembly should be used for cross connection control.
- (3) Aircraft and missile manufacturing plants.
- (4) Automotive plants, including plants that manufacture motorcycles, automobiles, trucks, recreational vehicles, and construction and agricultural equipment.
- (5) Beverage bottling plants, including dairies and breweries.
- (6) Canneries, packing houses, and reduction plants.
- (7) Car washes.
- (8) Chemical, biological, and radiological laboratories, including those in high schools, trade schools, colleges, universities, and research institutions.
- (9) Hospitals, clinics, medical buildings, autopsy facilities, morgues, other medical facilities, and mortuaries.
- (10) Metal and plastic manufacturing, fabricating, cleaning, plating, and processing facilities.
- (11) Plants manufacturing paper and paper products.
- (12) Plants manufacturing, refining, compounding, or processing fertilizer, film, herbicides, natural or synthetic rubber, pesticides, petroleum or petroleum products, pharmaceuticals, radiological materials, or any chemical that could be a contaminant to the public water supply.
- (13) Commercial facilities that use herbicides, pesticides, fertilizers, or any chemical that could be a contaminant to the public water supply.
- (14) Plants processing, blending, or refining animal, vegetable, or mineral oils.
- (15) Commercial laundries and dye works, excluding coin-operated Laundromats.
- (16) Sewage, storm water, and industrial waste treatment plants and pumping stations.
- (17) Waterfront facilities, including piers, docks, marinas, and shipyards.
- (18) Industrial facilities that recycle water.
- (19) Restricted or classified facilities (federal government defense or military installations), or other facilities closed to the supplier of water or to the commissioner.

Prohibited connections

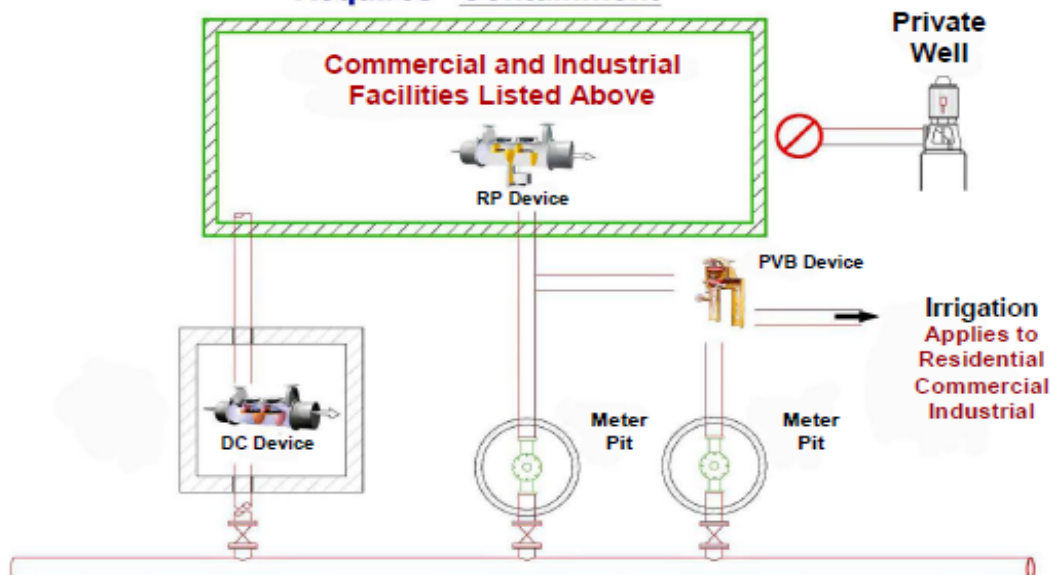

No secondary source of water supply shall be physically connected on the customer service line to or into the facility.
